Georgia Sims

Introduction:

#hellomynameis Georgia and this week I have worked in the pathology unit alongside Dr. Marie Parsons and the girls in pathology reception. This has been really helpful because in the future, I want to be a pathologist.

Your Learning

I now know for a fact I want to go into Pathology and this week was only a tester and now I want to go into being a pathologist. I know there is a lot to do as well.

Improvement

My idea comes from one of the steps they use a lot of in the lab, is the list with all the special treatment. The list is really long and hard to understand. So if you colour coded. Some of the list it would be easier to remember.

Current service

When I was in the lab the process would work by the blood coming in on trolleys and coming into the lab. The girls would then sort it out and do certain treatments to it. Then pass it onto the next step.
