

# Worcestershire Acute Hospitals NHS Trust, Our Journey from Paper to Electronic Patient Records (EPR)

Worcestershire Acute NHS Trust has rapidly deployed Altera Digital Health's Sunrise EPR solution across its three hospital sites; Worcester-shire Royal, Kidderminster Hospital and Alexan-dra Hospital. This has enabled the trust to quickly embark upon its digital transformation journey, improving patient safety and streamlining clinical workflows.

The system, which went live in January, has been successfully deployed across the trusts 56 in-patient wards. It is expected to improve patient safety, release time to care, and reduce length of stay.

Despite the recency of the go-live, benefits of the implementation are already being realised. Tracking boards are improving visibility of patients, enabling clinicians to prioritise patients based on their clinical need, and handwritten notes are now electronically inputted, eliminating the risk of illegible entries, saving time that was spent rewriting or interpreting notes.

The Trust opted for a phased approach when deploying Sunrise EPR. Initially piloting to three wards, the trust introduced it to all adult inpatient wards over 4 weeks. "It was important for us to take a phased approach to the go-live, It enabled us to learn along the way to make the transition as smooth as possible", as for many staff this is their first time working digitally. As a result, we have very quickly been able to improve the baseline of our digital maturity, with minimal disruption to patient care."

The deployment was led by a multidisciplinary EPR team, made up of technical, clinical, and operational staff, to ensure the solution was reflective of the trust's specific needs.

## Scope

### Adult Inpatient Nursing Documentation

Adult Inpatient Nursing Admission (MUST, Waterlow, Moving & Handing, Pain Assessment, Safeguarding)  
SSKIN Bundle Assessment  
Vital Signs Measurement - Adult (includes NEWS2)  
Assessment & Cares – Inpatient  
Nursing Risks Assessment  
Intentional Rounding  
Inpatient Discharge Planning  
Patient Property  
Intake and Output Fluid Balance Chart

### Drs Documentation

Doctor's Ward Round & Progress Note  
Clerking Note (including Rockwood)  
Specialty Review Note

## Process for delivery

### 1. Vision

Clinical Engagement  
Document decomposition  
Work with Clinical teams to understand documents and process  
Standardize/rationalise

### 2. Current state

Map all current patient care processes  
Baseline Benefits analysis

### 3. Gap analyses

Compare current state Maps/  
Document to Sunrise UKB

### 4. Future state

Map all future state patient care processes  
Review pathways and process  
Standardise

### 5. Build

Reduce waste  
Review  
Test

Review  
UAT

### 6. Readiness

Education/Training/  
Engagement  
Communications

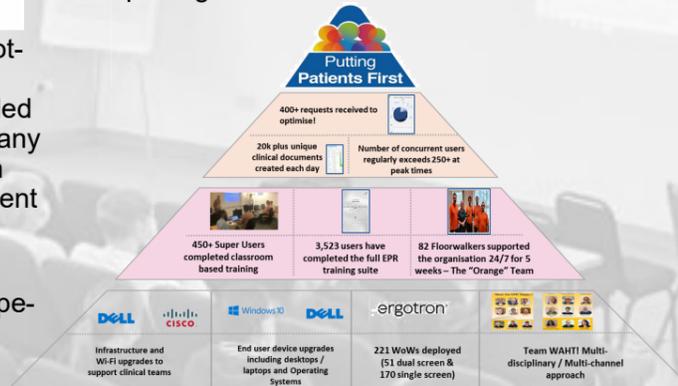

### 7. Go-Live

Floorwalkers

Command Centre

### 8. Benefits capture

### 9. Lesson Learnt

## Team

Chief Nurse Information Officer  
EPR Director  
Project managers  
Testing teams  
Config teams  
Altera Health support  
Clinical Change Analysts

## ELECTRONIC PATIENT RECORD SO FAR

**3M**  
documents loaded into the system

20k+ unique clinical documents created daily...the top 3 are:

1. intentional rounding
2. fluid balance
3. skin assessment flowsheet

With observations in one place, its easier to spot patients at risk/deteriorating

System averages 250+ concurrent users at peak times (10am to 12pm)

Positive feedback on time saved between finding physical documents and quick EPR searches

## Lessons learnt

- Remember the patient
- Think patient first
- Don't just move Paper to Digital
- Keep repeating your engagement. – staff leave
- The blueprint in never enough, just localise is never enough
- Test, Test, Test and Test
- Don't underestimate the time required to fix after testing
- UAT
- Don't underestimate the time required to fix after UAT
- If you don't engage the staff, you wont develop a system they will use
