## QI learning and challenge

- Through the use of QI tools such as process mappin we were able to identify problems
- We improved the reliability of medication rounds by communication and this also increased the awarene medicines
- Trust the process of using QI methodology
- Good MDT engagement and teamwork that lead to s • Challenges: Staff availability to attend training, ward impacting the pace of project delivery

### Impact

#### Change ideas

R code poster to be used on ePMA drug trolleys which referenced the itical medicines list, drug location list and emergency drug cupboard list tesize nurse training on how to access medicines out of hours hanges made to medication administration rounds where the night staff arted giving the morning medicines before their shift ended rioritised giving critical medicines first during medication rounds igital impact: enabled the ward to digitally transfer patients from ED to ard 9B and refreshed the link between critical medicines and ward stock ts
